

TECHNICAL SKILLS

Languages: TypeScript/JavaScript, SQL, Python, Java, C, HTML/CSS, BASH

Frameworks & libraries: React, Node.js, React Native, Next.js, Jest, Bootstrap, JSON, rST/MD/MDX

Tools: Git/GitHub, MongoDB, REST APIs, Postman, Axios

AI tooling: Claude Code agent hooks & workflow tooling, automated QA/content-validation skills

EDUCATION

Barnard College, Columbia University 2020 – 2024

Bachelor of Arts in Computer Science

Relevant Coursework (all at Columbia University): Full Stack Web Development, UI Design, Advanced Programming, Computer Networks, Fundamentals of Computer Systems, CS Theory, Discrete Mathematics, Data Structures in Java, Programming in Java, Introduction to Databases, Calculus III, Linear Algebra, Computers in Society (TA)

PROFESSIONAL EXPERIENCE

Associate Technical Writer | *MongoDB – AI Docs Tooling (Maverick) & Server Docs*

Aug 2024 – Present

- Designed and built AI-powered developer tooling in Python and TypeScript for MongoDB’s documentation teams, including Claude agent hooks and skills for Git workflow enforcement, broken-reference detection, nested-component errors, and SEO issues.
- Architected an AI-powered documentation QA system that renders affected pages into ASTs, segments content into named sections, and uses multi-agent evaluation to measure whether feature documentation accurately answers user questions.
- Ran a self-led audit of optimal PR size to design hooks that flag and block oversized PRs for Claude-based coding agents in order to reduce reviewer bottlenecks from increased PR-creation rates.
- Built a ref-anchor checker that validates anchor changes against every docs site before merge, preventing broken builds across the docs platform.
- Built and shipped TypeScript/React components supporting MongoDB’s docs platform migration from RST to MDX/Next.js, including interactive wayfinding and inline video components; authored automated tests and contributed 2 production PRs.
- Developed JavaScript integration tests for Grove, MongoDB’s code-example testing infrastructure, continuously validating executable examples and catching regressions as the product evolves.
- Co-led AI Enablement 101 to 50+ docs writers and leads, introducing AI-assisted workflows to the organization.

Technical Writing Intern | *MongoDB – Realm Database & App Services*

Jun – Aug 2023

- Designed and built a habit-tracker app in React Native syncing local and cloud non-relational data via the @realm/react library with Realm Database.
- Developed React Native code samples and built/ran unit tests for MongoDB’s mobile-first database SDK docs.
- Mastered team-based, source-control workflow through a “Docs-as-Code” process using Git & GitHub.

Software Engineering Intern | *NCR – Digital Banking*

May – Aug 2022

- Built React microapps for NCR’s developer portal, integrating NCR’s Apigee API.
- Built a Splunk dashboard visualizing API usage metrics across a platform serving 24 million banking consumers.

Teaching Assistant | *Columbia University – COMSW3410: Computers & Society*

Aug 2021 – Jan 2022

- Served as one of 3 Teaching Assistants for a 76-person computer ethics course; hosted weekly hour-long office hours, assisted students with assignments by discussing essay topics and helping with outlining essays.
- Graded 25 five to eight-page student papers weekly, provided written and verbal feedback via notes and conferences.

PROJECTS

Hacker — Digital Banking | *NCR Global Hackathon*

Jul 2022

- Built a “savings organizer” prototype in React and Material UI for an online banking platform; ranked top 25 of 400+ worldwide submissions.

Spotify Playlist Merger | *Personal Project*

Jun 2022

- Built a React application that merges users’ Spotify playlists via the Spotify API, implementing OAuth authentication and playlist data-merging logic.
